

History of Mainframe Computing

One way to appreciate the wonder of today's clients is to explore computer hardware of the past.

- 1) Research and select 10 significant events in the development of the mainframe computer from 1935 to the present. Each significant event should include the following information:
 - a) Name(s) of inventor/designer
 - b) Name of mainframe computer
 - c) The capabilities of the mainframe - how much data can it process and how quickly can it process?
 - d) What made this design significant - how did it aid in the development of later computers?
Graphic of mainframe, if possible
 - e) Report the results in either a PowerPoint presentation or a timeline in Microsoft Word
