

## **Chapter 2 Part A Case Study**

### **SCENARIO 2.1**

You have been asked to present a brief overview at a parent / teacher evening about the possibilities of employment for your students after they complete the Cisco Networking Academy course. You determine that one of the realistic opportunities that may be available to students is working as a technician in an ISP environment.

### **TASKS 2.1**

Create a brief presentation that could be given to parents to explain what an ISP is, where the ISP sits within the Internet “hierarchy”, and what opportunities exist for technicians within this environment. Given the importance of the Internet within society, you should be prepared to explain in some detail the role and importance of such technical persons in modern society.
